This review will be issued on a non-discriminatory basis without regard to race, color, religion, national origin, age, gender, handicap or marital status.

The North Cook County Soil and Water Conservation District is a non-taxing nonprofit local government.

^{**}For projects > 50 acres or any other unique project as determined by the SWCD Board of Directors, a modified fee schedule may be developed on an individual basis, based upon the size, complexity, and duration.

Fee Calculator and Worksheet

Step 1: Review Fee			
Acres of disturbance*			Line 1
Enter review fee using table 1	\$		Line 2
Step 2: Inspection Fee			
Length of project (whole years)			Line 3
NOTE: Prorated fees (partial years) will be invoiced & may delay your application.			
Enter inspection fee using table 1	\$		Line 4
Multiply line 3 and line 4	\$		Line 5
Step 3: In-Stream or Stream-Side Work Fee (If not applicable, er	ter S	0 in line 7 and go	to step 4)
Length of Work (months – round up)			Line 6
Enter fee using table 2	\$		Line 7
Step 4: Linear Project** (If not applicable, enter \$0 in line 10 and go	to st	ep 5)	
Enter the number of impacted wetlands on line 8			Line 8
Wetland impact fee	\$		Line 9
Multiply line 8 and line 9	\$		Line 10
		•	
Step 5: Total Fee			
Sum Lines 2, 5, 7, 10	\$		Line 11
*For all projects above 50 acres in size or any other unique project as determined by			
the NCCSWCD Board of Directors, a modified fee schedule will be developed on an			
individual basis, based upon the size, scope, complexity, and duration of the project.			
**Linear projects refer to roadway or utility projects			
Please remit this worksheet with your payment.			

Total Fee = Review Fee + Inspect fee + In-Stream Fee* + Wetland Impact Fee* + Pre-construction notice fee

^{*}if applicable

Site Plan Checklist

The soil erosion and sediment control plan cannot be reviewed until all of the following information is submitted for each upcoming active construction phase:

1. Existing site conditions and natural resources present, including:	
Site boundaries and adjacent lands which accurately identify site location. Buildings, roads and utilities.	
Buildings, roads and utilitiesTopography, vegetation, drainage patterns, subwatershed delineation, critical erosion areas, and any subsurface drainage tiles.	r
Wetland and floodplain delineation. Please show the boundaries on the construction plansAdjacent areas that affect or are affecting the project site, e.g. drainage onto or through the site affecting wetlands, streams, lakes, and drainage areas downstream. Vicinity map.	
Show areas where trees and vegetation are to be preserved.	
Map legend, including north arrow and scale on all materials submitted.	
2. Final site conditions, including:	
An accurate depiction of post-construction appearance, e.g. utilities, roads, buildings, open space.	
Locations, dimensions, cross sections and elevations of all (temporary and permanent)	
stormwater management facilities (including sediment basins), plus inlet and outlet locations. Surface flow direction, including sheet flow and concentrated flow direction.	
Post-construction topography, final contours should be easily distinguished (2-foot contour is	
preferred) including subwatershed delineations.	
3. A complete soil erosion and sediment control plan, including:	
Location and detailed drawings of all permanent and temporary soil erosion and sediment control pra A schedule outlining the installation of the practices with the responsible parties identified. Inspection, and maintenance schedules with responsible parties identified.	ctices.
Seeding information: rates, species, dates, fertilization, temporary or permanent.	
Location and dimension of all temporary soil and aggregate stockpiles.	
Details and plan concerning construction site dewatering.	
4. Locations, dimension & phase timeline of all land disturbing activities, including:	
Designate construction limits, areas that will be disturbed and areas of wetland fill.	
Describe grading and building schedule and phasing timeline. Create and submit a construction sequence for any in-stream work and/or critical areas.	
oreate and submit a construction sequence for any in-stream work and/or childer areas.	

Narrative Checklist

The soil erosion and sediment control plan cannot be reviewed until all of the following information is submitted for each upcoming active construction phase:

 _ Project description - Briefly describes the nature and purpose of the land disturbing activity, and the area (acres) to be disturbed.
 Existing site conditions - A description of the existing topography, vegetation, drainageways, subsurface drain tile, buildings, roads and utilities.
 _ Adjacent areas - A description of neighboring areas such as streams, lakes, residential areas, roads, etc. which might be affected by the land disturbance. Describe any adjacent or neighboring activities that may affect the soil erosion and sediment control plan.
 _ Off-site areas- Will any other areas be disturbed? Describe any off-site land disturbing activities.
 _ Critical areas - A description of areas on the site which have potentially serious problems, e.g. steep or long slopes, channels, intermittent streams, and side hill seeps.
 _ Soil erosion and sediment control measures- A description of the methods which will be used to control erosion and sedimentation on the site. Control methods should meet the standards in section 4 of the <u>Illinois Urban Manual.</u>
 _ Construction Sequence- A sequence of events for construction in and near creeks, streams, or other critical areas.
 _ Permanent stabilization - A brief description including specifications of how the site will be stabilized after construction is completed.
 _ Calculations- Detailed calculations for the design of temporary sediment basins, permanent stormwater detention basins, diversions, channels, etc. Include pre and post development runoff.
 Detail drawings - Include detail drawings form the <u>Illinois Urban Manual</u> . Any structural practices used that are not referenced to the Illinois Urban Manual or local handbooks should be explained and illustrated with detail drawings.
 _ Operation and Maintenance - Provide a schedule of maintenance for all temporary and permanent erosion and sediment control practices to ensure that they perform properly. Identify the parties responsible for maintenance.
